of CD28, IL-2, gamma-interferon or IL-8 in a mammal. The method comprises subcutaneous administration of an oligonucleotide (OGN). AAX90288 to AAX90291 represent specifically claimed OGNs for use in the method. The OGNs are used for the treatment of immune system-mediated diseases. The present sequence represents a CD28 inhibiting phosphorothioate oligonucleotide used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for inhibiting the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                        (IL-2) production and T cell CD28 gene expression, useful in the treatment of CD28 mediated diseases, particularly immune system disease, e.g. graft versus host disease, septicularly immune system disease, e.g. graft versus host disease, septic shock, viral disease, psoriasis, type I diabetes mellitus, thyroiditis, sarcoides, multiple sclerosis, uvelits, rheumatorid arthritis, systemic lupus erythematosis, inflammatory bowel disease, etc. Reducing CD28 expression may reduce the effects of antigenic simulation of CD28 positive T cells, with a consequent reduction in cycokine release.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CD28; inhibition; antisense oligonucleotide; interleukin 2; IL-2; immune system mediated disease; gamma-interferon; IL-8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Reduction; T cell; CD28; gene expression; treatment; immune system; disorder; graft versus host disease; septic shock; viral disease; psoriasis; type I diabetes mellitus; thyroiditis; sarcoides; multiple sclerosis; uvetics; theumatoid arthritis; interleukin 2; systemic lupus erythematosus; inflammatory bowel disease;
                                                                                                                                                                                                                                          The present oligonucleotide reduces CD28 dependent interleukin-2 (IL-2) production and T cell CD28 gene expression, useful in the treatment of CD28 mediated diseases, particularly immune system disorders, e.g. graft versus host disease, septic shock, viral disease, psoriasis, type I diabetes mallitus, thyroiditis, viral sarcoides, multiple sclerosis, uveitis, rheumatoid arthritis, systemic lugus erythematosus, inflammatory bowel disease, etc.. Reducing CD28 expression may reduce the effects of antigenic stimulation of CD28 positive T cells, with a consequent reduction (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                        ide which reduces CD28 gene expression in T cells immune system diseases, e.g. graft vs. host disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oligo:nucleotide which reduces CD28 gene expression in T cells

The present sequence represents a polynucleotide that is able to form a triple helix with a double stranded sequence. Cytosine bases in the present can be replaced with 5-methylotycasine for increased triplex stability. The present sequence is used in the assay of the invention, where it can be part of the anchor DNA or reporter DNA sequence. The assay comprises adding a sample containing double-stranded DNA test sequences to an aqueous medium containing at least one complex of anchor DNA, attached to a solid support, and reporter DNA, where either a part of the anchor DNA or reporter DNA is designed to form a triple-strand structure with part of the test sequence. Triplex
                                                                                                                                                                                                                                                                                                                                                                                                                              Assay of genetic sequences based on triplex formation from double stranded analyte - and hybrid of anchor and reporter sequences, with reporter released if triplex formation occurs, used e.g. to identify bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  formation results in displacement of the reporter DNA which is detected as an indication of the presence of the DNA test sequence. The method is used to detect DNA sequences, particularly for identification of bacteria (by detecting genes for ribosomal RNA) is clinical samples, but also detection of oncogenes and Hepatitis B v
Triple helix third strand of alpha-globin gene nucleotides 827-843.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

The method comprises subcutaneous administration of an oligonucleotide (OGN) AAX90288 to AAX90291 represent specifically claimed OGNs for used in the method. The OGNs are used for the treatment of immune system-mediated diseases. The present sequence represents a CD28 inhibiting phosphorothioate oligonucleotide used in the exemplification of the

Claim 3; Page 9; 53pp;

```
The sequence is an antisense molecule directed against position -3 to +18, relative to the start codon of the gene for mouse fibroblast growth factor 1. The polynucleotide can be used for inhibiting vascular smooth muscle cell proliferation and for treating a disease e.g. vascular stenosis, post angioplasty restenosis, athereetomy, atherosclerosis, atrial venous shunt failure, cardiac she also AAQY0313-60. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence is an antisense molecule directed against position -6 to +15, relative to the start codon of the gene for mouse fibroblast growth factor 1. The polymuclectide can be used for inhibiting vascular smooth muscle cell proliferation and for treating a disease e.g. vascular stenosis, post angioplasty restenosis, attherectomy, atherosclerosis, atrial venous shunt failure, cardiac

                                                                                                                                                                                                                                                                                                                                                                                                                The sequence is an antisense molecule directed against position -3 to +15, relative to the start codon of the gene for mouse fibroblast growth factor 1. The polymudleoided can be used for inhibiting vascular smooth muscle cell proliferation and for treating a disease e.g. vascular stenosis, post angioplasty restenosis, atherectomy, atherosclerosis, atrial venous shunt failure, cardiac hypertrophy, vascular surgery and organ transplant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a method of diagnosing a vascular disease in an individual, involving determining the sequence at various polymorphic sites within the human thrombospondin 1 and thrombospondin 4 genes. The sequences at a number of polymorphic sites are also provided in the specification. In particular, the method can be used in the diagnosis of atherosclerosis, myocardial infarction, coronary heart disease, stroke, peripheral vascular diseases, venous thromboembolism and pulmonary embolism. Single nucleotide polymorphisms (SNPs) are also useful in forensise, perennity testing, genetic analysis and phenotype correlations to diseases. The present sequence is an example of one of the human gene SNPS shown in the specification.
                                                                                                                                                                                                                                                                                            Human; variant thrombospondin 1; variant thrombospondin 4; SNP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention identifies a genetic locus ASTH1, associated with asthma, mapped to human chromosome 11p. ASTH11 and ASTH13 are genes present within the locus, located close to each other on human chromosome 11p, and have similar patterns of expression, and common sequence motifs. The ASTH1 genes and fragments, encoded protein, genomic regulatory regions and anti-ASTH1 antibodies are useful in the identification of individuals predsiposed to development of asthma, and for the modulation of gene activity in vivo for prophylactic and therapeutic purposes. The ASTH1 protein is useful as an immunogen to raise specific antibodies, in drug screening for compositions that mimic or modulate ASTH1 activity or expression, including altered forms of ASTH1 protein, and as a therapeutic. Sequences AAZ18643-Z18685 intron/exon junction sequences of ASTH1 and ASTH1J genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present invention is concerned with a number of secreted proteins and their coding sequences isolated from various human cDNA libraries. The probes shown in the specification (AAA91312-A93186) can be used to obtain the cloned sequences from bacterial cells. The proteins and coding sequences can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopoiesis regulators (treating myeloid or lymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic activity, . 0 Score 13.4; DB 21; Length 20; Pred. The invention relates to the ASTH1 locus on the short arm of human chromosome (11p). This locus comprises the ASTH11 and ASTH11 and ASTH11 genes, which as associated which a genetic predisposition to asthma and common sequence of the ASTH11 and ASTH11 genes are oriented in byposite directions with the ASTH11 and ASTH11 genes are oriented in copposite directions with the ASTH11 and ASTH11 genes are oriented in capression and common sequence motifs. They are both expressed in trachea, lung and several other tissues. ASTH11 and ASTH11 are novel complexed in the activation of a variety of genes including the TCR asthma. Both ASTH11 and ASTH11 mRNAs are alternatively splicing of transcripts has no effect on the open reading crame of ASTH11 and ASTH11 mRNAs are alternatively splicing of transcripts has no effect on the open reading crame of ASTH11 as the exons involved are all 5' to the start codon in the coop in contrast, alternative splicing of ASTH11 transcripts results of the ASTH1 is offerms. The invention also encompasses mouse atthij protein. The ASTH1 nucleic acids are useful as diagnostics to identify a hereditary predisposition to asthma, as probes for identifying atthij proteins, and for generating spression of the gene in a mimals or site specific gene modifications in cell lines The encoded contrast are useful as immunogens to raise specific antibodies; in chargeuring for compositions that mimic or modulate activity or expression of ASTH11 and/or ASTH11 (including altered forms of these corrections, and as a therapeutic. The ASTH1 genes or fragments thereof, and and as a therapeutic. The ASTH1 genes or fragments thereof, corrections that mimic or modulate activity or expression of ASTH11 and/or ASTH11 in the identification of anti-ASTH11 and predise are useful in the identification of individuals are useful in the identification of individuals in vivo for prophylactic and therapeutic purposes. The intaking activity and the are useful in the intended forms and individuals in the intended forms. The prophy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  in vivo for prophylactic and therapeutic purposes. The intact ASTHII or ASTHIJ proteins or active fragments thereof may be used to modulate or reduce bronchial hyperreactivity. Sequences AAA80550-A80570 represent the exon boundary regions of the human ASTHII gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 20 BP; 3 A; 2 C; 12 G; 3 T; 0 other;

ö
                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to human endothelin converting enzyme-3 protein (ECE-3). ECE-3 is useful for screening selective modulators of vertebrate ECE-3 function, that are useful for treating diseases such as hypertension, arrherosclerosis, vascular restenosis, myocardial ischemia, cerebral vasospasm and subarachnoid hermorrhage, congestive heart failure, diabetes, endotoxic shock, migratine, Raynaud's disease, and also for treating pulmonary disease such as sthma, pulmonary hypertension and adult respiratory distress
                                                                                                                                                                                                                                                                                                                                  Nucleic acid molecule encoding human endothelin converting enzyme-3 protein, useful for screening modulators that are useful for treating atherosclerosis, myocardial and cerebral ischemia, and diabetes
                                                                                                                          ECE-3; endothelin converting enzyme 3; hypertension; artherosclerosis; vascular restenosis; myocardial ischemia; cerebral vascospasm; subarachnoid hermorrhage; congestive heart failure; diabbetes; endotoxic shock; migraine; Raynaud's disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NOGO). The nucleic acids et a ribozyme or a DNAzyme) an Inozyme (an endolytic nucleic acids (e.g. a ribozyme or a DNAzyme) an Inozyme (an endolytic nucleic acid cleaving a an RNA molecule motif), a G-Cleaver (cleaving RNA with a NYN motif) pr an amberzyme (cleaving RNA with an NN triplet), a zinzyme (cleaving RNA with an YGY motif). The CD20-targetting nucleic acid is used

to cleave RNA of CD20 in the presence of a divalent cation that is preferably Mg^2+. Furthermore, it may be contacted with a cell to reduce CD20 activity of the cell and treat a patient having a condition associated with the level of CD20. The treatment may further comprise the cuse of one or more therapies. In particular, the CD20 targetting CC use of one or more therapies. In particular, the CD20 targetting CC low-grade or follicular non-Hodghin's lymphoma (NHL), bulky lymphoma, low-grade or follicular non-Hodghin's lymphoma (MLL), communocytoma (MC), small B-call lymphocytic leukaemia, HIV (human CC immunocytoma (MC), small B-call lymphocytic lymphoma, immune (MCL), immunocytoma (MC), small B-call lymphocytic lymphoma, immune (MC), immunocytoma elmo, single used to cleave RNA of the NOGO gene in the presence of a clavalent cation that is preferably Mg^2+. Furthermore, the nucleic acid may be contacted with a cell to reduce NOGO activity of the cell and creatment may further comprise the use of one or more therapies.

CC freat a patient having a condition associated with the level of NOGO. The creatment may further comprise the use of one or more therapies.

CC central nervous system (NS) injury and cerebrovascular accident (CVA, chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ALS), chemotherapy-induced neuropathy, anyotrophic neuropathy accident CVA, chemotherapy-induced neu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Labusatory whose DNA wesource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb]AP129072.13, a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored for another chemically competent E. coli xiio-Gold (Stratagene) cells and selected for amplcillin resistance."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarcse gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (qi|4792114|jub|APL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AZ512534

(http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at conseant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWM42 (qi|4772114) qpl/APL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically completent E. coli XL10.Gold (Stratagene) cells and 1 c. 17 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   19 bp DNA linear GSS 05-OCT-2000 IM0328A24F Mouse 10kb plasmid UUGCIM library Mus musculus genomic clone UUGCIM0328A24 F, genomic survey sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /Jab hose="E. Coli strain XL10-Gold, T1-resistant, F-"
/clone_lib="Mouse 10kb plasmid UUGCIM library"
/note="Vector: PMD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated by respected by
no binch orifice at constant velocity. The sheared DNA
was blunt enda-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pMD42 (gi|4732114|gb|A1229072.1); a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XII10-Gold (Stratagene) cells
and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Au345/92 19-SEP-2000 1M0080G12R Mouse 10kb plasmid UUGC1M library Mus musculus genomic clone UUGC1M0080G12 R, genomic survey sequence.

/lab host="E. Coli strain XL10-Gold, T1-resistant, F-"
/clone_lib="Mouse_10kb_plasmid_UUGCIM_library"
/note="Vector: PWD42nv; Purified genomic_DNA_from M.
musculus_C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse_DNA_Resources/Accuments/Anares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch oritice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated by repeated by
norliceotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-0old (Stratagene) cells
and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligomucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (4)4732114 (4)5 kb123072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-complement. So coll Xii0-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AZ512326 Mouse 10kb plasmid UUGC1M library Mus musculus genomic clone UUGC1M0357118R, genomic survey sequence.

/clone libs "Mouse lott plasmid UDGIM library"
//clone libs "Mouse lott plasmid UDGIM library"
//note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was Mydrodynamically sheared by repeated passage through a
0.005 inch orifica at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polymucleotide kinase. Adaptor of ligonicleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarces gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gil4732114) pbl.Pat.29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Inductory Wouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with 74 DNA polymerase and 74
polymuclectide kinase. Adaptor oligoniclectides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarcse gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil 4732114 gb| APL29072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò

                                                                                                                                                                                                                                                                                                                                                                                                    TITLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch oxilice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gelectrophoresis. Vector DNA was prepared from a derivative of pwdy (gql 4732114) gbl AF129072.1), a copy number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll X110-Gold (Stratagene) cells and selected for ampicillin resistance."

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil [473214][6]] API29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligomuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarcse gel electrophoresis. Vector DNA was prepared from a derivative of DWD42 (4)4792114 [gb/H229072.1], a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Sequence 21, Application US/08250856A

Patent No. 585355

BAPPLICANT: Monia, Brett P. and Boggs, Russell T.

TITLE OF INVENTION: Antisense Oligonucleotide Modulation
CORPERSE LAW Offices of Jame Massey Licata
STATE: No 8002

COMPUTER READABLE FORM:
MEDIUM TIPE: DISKETTE, 3.5 INCH, 1.44 Mb STORAGE
COMPUTER: IBM S6/2

COMPUTER: IBM S6/2

COMPUTER: MAY 31, 1994

CLASSIFICATION NUMBER: US/08/250,856A

FILING DATE: MAY 31, 1994

CLASSIFICATION NUMBER: 15PH-0094

FILING DATE: MAY 31, 1994

CLASSIFICATION NUMBER: 32,257

REPREMEDED DOCKET NUMBER: 32,257

REPREMEDED DOCKET NUMBER: 33,257

REPREMEDED DOCKET NUMBER: 33,2940

TELEPHAN: (609) 779-2400

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | pna/US6015_COMB.seq:+

Sequence 5724, Application PC/TUS0238216
GENERAL IMPORMATION:
APPLICANT: ROSELTA Genomics LTD
TITLE OF INVENTION: BIOINFORMATICALLY DETECTABLE GROUP OF NOVEL VIRAL REGULATORY
TITLE OF INVENTION: GENES AND USES THEREOF
FILE REFRENCE: 55002
CURRENT APPLICALTON NUMBER: PCT/US02/38216
CURRENT FILING DATE: 2002-11-12
NUMBER OF SEQ ID NOS: 86841
SEQ TRANS PARENTIN VERSION 3.2
SEQ ID NO 5724
LENGTH: 19
